# Network services, Internet style			
# Note that it is presently the policy of IANA to assign a single well-known			
# port number for both TCP and UDP; hence, officially ports have two entries			
# even if the protocol doesn't support UDP operations.			
#			
# Updated from http://www.iana.org/assignments/port-numbers and other			
# sources like http://www.freebsd.org/cgi/cvsweb.cgi/src/etc/services .			
# New ports will be added on request if they have been officially assigned			
# by IANA and used in the real-world or are needed by a debian package.			
# If you need a huge list of used numbers please install the nmap package.

# From ``Assigned Numbers``:			
#> The Registered Ports are not controlled by the IANA and on most systems can be used by ordinary user processes or programs executed by ordinary users.			
#> Ports are used in the TCP [45,106] to name the ends of logical connections which carry long term conversations. For the purpose of providing services to unknown callers, a service contact port is defined. This list specifies the port used by the server process as its contact port. While the IANA can not control uses of these ports it does register or list uses of these ports as a convenience to the community.
